

Giovanni BULFARO - CV

Giovanni Bulfaro is currently a post-doctoral researcher at the Department of Biochemistry at La Sapienza University, where he works in the group led by Professor Beatrice Vallone. His research focuses on the structural characterization of protein complexes, with a particular emphasis on their implications in therapeutic applications.

From 2021 to 2024, he pursued a PhD in Biochemistry at La Sapienza University in collaboration with Takis S.r.l. He was involved in a project called BIOSTRUCT-FARM that aimed to explore the structural interactions between monoclonal antibodies produced by Takis S.r.l. and the tumor marker ErbB3. In addition to his doctoral studies, Giovanni completed a research internship at Columbia University under the European Union's H2020-MSCA-RISE program, where he acquired skills in Cryo-EM sample preparation and data analysis.
