

## **Miriam Caviglia**

Miriam Caviglia completed her master's degree in Chemistry and Advanced Chemical Methodologies at the University of Camerino in 2021. Successively, she held a postgraduate research scholarship titled "Study of new tin-free "green" catalysts, active in the cross-linking reaction of polymeric compounds modified with silanes" at the University of Camerino from July 2021 to December 2023, in collaboration with the polymer industry Fainplast srl of Ascoli Piceno. She is currently a PhD student in inorganic chemistry at the University of Camerino, in collaboration with the Italian National Institute of Health. Her research is focused on the synthesis of copper and silver metal complexes with potential anticancer and antiviral activity.
