

C.V. Jacopo Forte

Dr. Jacopo Forte received the master degree in Pharmacy in 2020 and he obtained his PhD in Pharmaceutical Sciences at the "Sapienza" University of Rome in 2023.

He is currently a research grant at "La Sapienza University of Rome" and adjunct professor of "Pharmaceutical Technology, Socioeconomics and Legislation" at the Faculty of Pharmacy of "University Cattolica del Sacro Cuore", Rome.

Dr. Jacopo Forte started his scientific carrier working in the field of drug delivery, in particular on the preparation and characterization of pH-sensitive vesicles. In last years he focused his research on the preparation and the characterization of phospholipid and surfactant vesicles suitable for drug delivery in several pharmaceutical applications: topical, ophthalmic, diagnostic, pulmonary, oral, CNS disorders and cellular targeting.

Recently he approached also deep studies related to physical-chemical characterization of vesicular formulations as drug delivery systems, preparation of mixed systems polymer/vesicles, nanoemulsions and nanobubbles for different therapeutic and diagnostic applications.

Dr. Jacopo Forte authored and co-authored 13 articles and about 20 oral and poster presentations.

He serves as peer reviewer for 4 journals focused on nanotechnology and drug delivery.
