

Federica GABRIELE - CV

Federica Gabriele received her bachelor's and master's degrees in biotechnology from the University of L'Aquila, Italy. In 2021 she obtained a NIH-funded research grant, working on the “Identification of preclinical candidates for the treatment of schistosomiasis” at Prof. Francesco Angelucci's structural biology laboratory at the University of L'Aquila. Under the supervision of Professors Rodolfo Ippoliti and Francesco Angelucci, she began her Ph.D. studies, mainly investigating the structure-function relationship of thiol-dependent redox active proteins of biomedical relevance, through biochemical and structural studies.
