

Saverio Latorrata received his M.Sc. degree in Chemical Engineering (2008) and PhD in Materials Engineering (2014) at Politecnico di Milano. Currently he is Senior Researcher at the Department of Chemistry, Materials and Chemical Engineering of the same institution. His research interests are mainly related to materials for electrochemical energy generators and electronic devices with a special focus on their sustainability and mitigating mechanisms of degradation. He is also involved in research lines about structured self-assembling materials for wastewater treatment. He teaches the course “Materials for electrical applications” and “Chemistry and materials for energy” to students of electrical, chemical and materials engineering; he is laboratory supervisor of several master students and PhD candidates, and reviewer for more than ten international scientific journals. He collaborates with companies on research projects on electronic devices and materials for wastewater treatment.
