

Ivan MASTRONARDO_CV

Ivan Mastronardo is an accomplished chemist specializing in the synthesis and characterization of electroactive materials and solid electrolytes. Currently, he holds the position of Research Fellow at the National Research Council (C.N.R.) in Messina, Italy. In this role, he focuses on the synthesis of electroactive materials by electrospinning and the development of solid electrolytes for batteries, both polymeric and ceramic. His responsibilities also include the physicochemical and electrochemical characterization of materials, as well as the assembly and testing of sodium-based batteries.
