

Alessandro Pedico is a researcher at Istituto Nazionale di Ricerca Metrologica (INRiM), Turin, Italy. His expertise is on carbon-based functionalized materials for water desalination and energy harvesting from salinity gradient. He graduated in 2016 in Nanotechnologies for ICTs at Politecnico di Torino. He completed his PhD program in Electrical, Electronics and Communications Engineering at Politecnico di Torino in 2021. His research activity involves graphene oxide, both in form of membrane or as additive in carbon-based 3D structures, as it is or functionalized, for water purification and energy application.
