

Marta Pollini is a Ph.D student of Chemical and Pharmaceutical Sciences and Related Industrial Innovation at the University of Pavia. She is working under the supervision of Prof. Silvia Rossi and Prof. Giuseppina Sandri at Biopharmaceutics and Formulation Development Laboratory (Department of Drug Sciences, University of Pavia). Currently, her work is focused on a project funded by the European Union aiming at the development of 3D-printed hydrogels for the treatment of chronic skin wounds. Furthermore, she is involved in the development of stimuli-responsive scaffolds for tissue engineering via spinning technologies.
